

Project Executable Files

Date	11 July 2026
Team ID	SL-2026-02
Project Name	Smart Lender – Loan Eligibility Prediction Using Machine Learning
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	No (<i>Local Deployment</i>)
7	Executable binary / APK (if applicable)	NA
8	Dockerfile / Containerization configuration	NA
9	Test files and test results	Yes
10	Demo video / Walkthrough	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Smart-Lender/

```
|
|  └─ app.py
|  └─ requirements.txt
|  └─ README.md
|  └─ Loan Prediction.ipynb
|  └─ model.pkl
|  └─ transform.pkl
|
|  └─ dataset/
|    └─ loan_prediction.csv
|
|  └─ templates/
|    └─ home.html
|    └─ index.html
|    └─ result.html
|    └─ error.html
|
|  └─ static/
|    └─ css/
|      └─ style.css
|    └─ js/
|      └─ script.js
|    └─ images/
|      └─ logo.png
|
|  └─ screenshots/
|    └─ home_page.png
|    └─ prediction_result.png
|    └─ terminal_output.png
|    └─ postman_api.png
|
└─ test/
    └─ test_cases.txt
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Local Flask Server (http://127.0.0.1:5000/)
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Local Machine (Flask Development Server)
Repository Link	<i>Paste your GitHub Repository URL here</i>
Demo Video Link	<i>Paste your Demo Video URL here</i>

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install **Python 3.10 or later**.
2. Open the project folder in **Visual Studio Code** or any Python IDE.
3. Install the required packages using:

```
pip install -r requirements.txt
```
4. Ensure the following files are present in the project directory:
 - model.pkl
 - transform.pkl
 - app.py
5. Start the Flask application:

```
python app.py
```
6. Open a web browser and visit:

```
http://127.0.0.1:5000/
```
7. Enter the applicant's loan details in the form.
8. Click **Predict Loan Eligibility**.
9. The application displays whether the applicant is **Eligible** or **Not Eligible** for the loan.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Application currently runs on the local Flask server only.	Can be deployed to Render, Railway, or AWS for online access.
2	Prediction depends on the quality and completeness of the training dataset.	Improve accuracy by training with a larger and more diverse dataset.
3	No user authentication or database support is implemented.	Can be added in future versions using Flask-Login and a database such as MySQL or PostgreSQL.
